I Have a Braemar ducted Is there a way to activate the Fan Only without heating. Thank you Gil no but can run an evaporative cooler on the I cannot work out what causes the squeal and predict when it will happen. I have removed the controller thinking that there would be batteries, but where the batteries. The heater would start and cut out on high temp as the room fan was not. I think you could do this if you had the Spectrolink SCC controller. Owner Manuals. Mainly to be able to control the ducted heating remotely. I have looked around at many different websites to try and work it out but the problem I am having is that my thermostat and control board dont have any labels. The Nest website has a compatibility checker but you need to know the labels to check so I am a bit lost as to how to work it out. So I thought I would ask the clever people here and to see if someone else has installed a Nest or similar controller to their Braemar ducted heating unit that is similar or the same to mine. Then everything would work fine again. As with anything when handling appliances that can go BOOM get an expert to do it. Fan wasnt the issue. Judging by the diagnostics, this is normal. Its only a problem if the light stays on or flashes 2 or 3 times. That I need to get going again as its freezing cold. Hoping to get me by till I can replace it.

Also tried a temp bypass thus excluding them as the issue The heater is still doing after it worked for some time. Guessing that wasnt the problem. It previously had furniture blocking it slightly which if it has a vacuum valve may have caused issues Suspecting the thermistor. Given the thing starts it doesnt sound like anything to do with spark. I dont mind buying part for him to put in if we can work out the part and its not going to cost a small fortune. I opened up the switch and all seems fine. From what I could see there were no tears in the membrane. Or should I just buy a new pressure switch Worked great for 4 years now just keeps turning off and going to reset. Have had 3 techs all say its something different. Replaced the thermister, etc etc. Still wont work am freezing and just want to be warm. Have tried all the suggestions on forum and nothing works. Surely it cant be difficult. Techs say thermister to close to heat source but really how did it work like a dream for four years and now kaput. I know good and bad with all Unit lights by holding manual button inside heater box then seems to operate OK up to the set temperature. Then goes out and fails to come back until you go outside and hold button down again. The voltage going to the thermostat reads zero at first check but 7.2 volt after I unplug the igniter. Is 7.2V correct I have a Vulcan with 24V required. Let me check the model number tonight. I am not such convinced that it can only be replaced. Includes manual thermostat. Smart, sophisticated and intuitive, its discreet, modern design will blend seamlessly into the decor of your home. As easy to use as your familiar touch screens, this controller's intuitive user navigation system makes operating simple. Keeping your home and your family cool in summer is easy and economical with the MagIQtouch Controller and your Braemar ducted heater.

InShot Burner™ The InShot Burner™ shapes the flame for maximum heat, minimising gas

wastage for higher efficiency. The burners are made of longlife aluminium, reducing maintenance requirements. Combustion inducer fan Using leadingedge bearing, motorcooling and speed control technologies, Braemar's combustion inducer fan draws all combustion gases through the heat exchanger and expels them safely outdoors. It's designed for ultrasafe, quiet operation. Electronic ignition Microprocessor controlled electronic ignition eliminates the need for a pilot light. It manages the gas ignition system and the fan controller system, ensures dependable ignition and monitors all heater, flame sensor and safety functions. Ecostar TriAction™ heat exchanger This comes standard on all five and six star Braemar ducted gas heaters except the noncondensing five star THM range. Delivering maximum heat transfer in minimum space, it features a "noweld" tubular design for maximum durability and longlife corrosionresistant construction. That's why all Braemar heaters have numerous layers of safety points to protect you at all times. Flexible installation With Braemar ducted heating, you can install the heater in the roof our outside the house, with ducts in the ceiling or under the floor. Easier installation Seeley International's twopiece heater has been a runaway hit. This modular construction means that the complete range of Braemar heaters are much easier to install. Also, the heater cabinet is specially designed for a quickchange panel arrangement. Your installer can interchange the panels to suit various inlet and outlet requirements. Goods must be picked up by the person matching card details. All goods delivered by a third party are to be paid via EFT.
